

Proficiency Historian 4.0

The foundation of enterprise operations data management, delivering insight through information

Features

- **Lower Total Cost of Ownership**
 - Simple, intuitive configuration
 - True thin-client administration
 - Support for virtualization
- **Enterprise Performance**
 - 64-bit architecture
 - Sub-second sampling
- **Open & Layered Compatibility**
 - Full 32-bit compatibility
 - Wide range of collectors, including OPC Alarms and Events
 - Embedded applications support via Windows XPe
 - Highly compatible with third-party solutions
- **Standard Interfaces for Data Access**
 - Open access for ERP and MES applications
 - Application integration via OLE DB, User API, SDK, and OPC HDA
 - Third-party historian collectors
- **Highly Reliable System Architecture**
 - Fault tolerant architecture
 - Support for Microsoft® Cluster Server
 - Redundant data collectors
 - Enhanced data security
- **Advanced Data Management**
 - Powerful data management and system optimization tools
 - Designed to help customers comply with FDA's 21 CFR Part 11
 - Calculation & server-to-server collection

At the core of GE's Proficiency® software platform, Proficiency Historian provides a high-performance foundation for enterprise-class solutions.

Proficiency Historian from GE Intelligent Platforms is a powerful enterprise-wide data historian that collects, archives, and distributes tremendous volumes of production information at extremely high speeds.

Increase Your Process Visibility

Built specifically for the acquisition, storage and retrieval of industrial process information, Proficiency Historian improves visibility, provides context to raw data, and aggregates islands of information—resulting in better and faster decisions, increased productivity and reduced costs across your enterprise.

Proficiency Historian offers unique capabilities and benefits for a sustainable competitive advantage:

- Built-in Data Collection
- Fast Read/Write Performance Speeds
- High Data Compression
- Quick Time to Value
- Enhanced Data Security
- Robust Redundancy for High Availability
- Open & Layered Integration

Improve Processes Across Your Business

Proficiency Historian ties together islands of automation information without compromising data resolution. It enables an integrated view of your entire operations with accurate, real-time information and instant access to historical data.

With Proficiency Historian, you can compare past production runs, analyze the data prior to a downtime event, and plot ideal production runs against in-process runs. You can easily generate reports and share information across your enterprise using standard web browser tools.

Seamless Integration With the Proficiency Software Suite

Proficiency Historian is part of GE's award-winning Proficiency software suite, the world standard in high-performance industrial software solutions. The tightly integrated, comprehensive suite of world-class products and services includes HMI/SCADA, advanced analytics, MES, work process management solutions built on the Proficiency SOA platform, and more—addressing a wide range of operations challenges across various industries.

Proficy Historian 4.0 - The foundation of enterprise operations management

Built-in Data Collection That Leverages OPC and Specific Built-In Drivers to Legacy or Non-Standard Equipment

Proficy Historian includes built-in data collection capabilities and can capture data from multiple sensors and systems. It uses manufacturing standards such as Object Linking and Embedding for Process Control (OPC), which facilitates communications by providing a consistent method of accessing data across devices.

Instead of having to build custom software for every type of data source as required for other solutions, Proficy Historian does not need to know any of the details regarding the propriety data sources. It can instantly connect to any OPC-enabled solution to collect data, providing flexibility, time savings and reduced costs.

Faster Speeds

In contrast to the modest performance of relational databases for large data sets or associated periods of time, Proficy Historian provides much faster read/write performance and “down to the millisecond” resolution for true real-time data.

Proficy Historian is built to store, and more importantly, retrieve production/process data in the way you need it. Its aggrega-

tion and retrieval methods would be difficult in other database technologies. This capability enables better responsiveness by quickly providing the granularity of data needed to analyze and solve intense process applications.

High Data Compression

Proficy Historian comprises powerful compression algorithms, which enable you to store years of data easily and securely online—enhancing performance, reducing maintenance and lowering costs. For example, you can configure Proficy Historian without the active maintenance and back-up routines that a relational database requires. Archives can be automatically created, backed up, and purged—enabling extended use without the need for a database administrator.

Quick Time to Value

When installing Proficy Historian, you can “normalize” the implementation, using standard interfaces to decrease implementation time by approximately 50%. You don’t need to manage or create data “schemas,” triggers, stored procedures or views—resulting in quick installation and configuration without custom coding or scripting.

Proficy Historian has a pre-built interface to the automation layer, providing a single

environment whereby you only have to configure tags once, and you can store process data seamlessly in a secure, central location. Through an intuitive interface and access to powerful configuration and archive management capabilities, you can streamline system administration activities, reducing overall cost of ownership. Importantly, your system can grow efficiently and effectively as your solution scales across the enterprise, allowing for expected changes without loss of information or complex and costly re-mapping of data.

Enhanced Data Security

Less vulnerable to attacks from hackers and viruses such as SQL injection (or SQL insertion), Proficy Historian is designed to enforce higher standards of data security. It does not allow insert, update, or deletion of data through standard interfaces, and you can implement security for historians at the functional group or down at the tag level—a task that would be exceedingly difficult with an RDB.

Proficy Historian tracks many of these changes by default and helps address strict regulatory requirements such as the FDA’s 21 CFR Part 11 through features such as electronic signatures.

Comparison of disk space efficiency
RDB vs. Proficy Historian

NOTE:
This data represents a specific test on 400,000 samples logged to a standard RDB and Proficy Historian. Results will vary depending on the raw data set used and the RDB schema employed.

With no compression at all, Proficy Historian offers much higher disk space efficiency than an RDB. When using a 1% dead band compression, it delivers even greater efficiency for enhanced performance and reduced maintenance.

Robust Redundancy for High Availability

Proficy Historian offers clustering at the data store much like a relational database, as well as another level of redundancy at the collector function. If there are mission-critical data collection points, the collectors themselves can be configured in a redundant fashion.

The solution also addresses network and server disruptions through a “store and forward” capability, which buffers data at the collector should a disruption occur. The buffers are eventually uploaded when the server comes back online with automatic reconnection—ensuring no data loss.

Open & Layered Philosophy

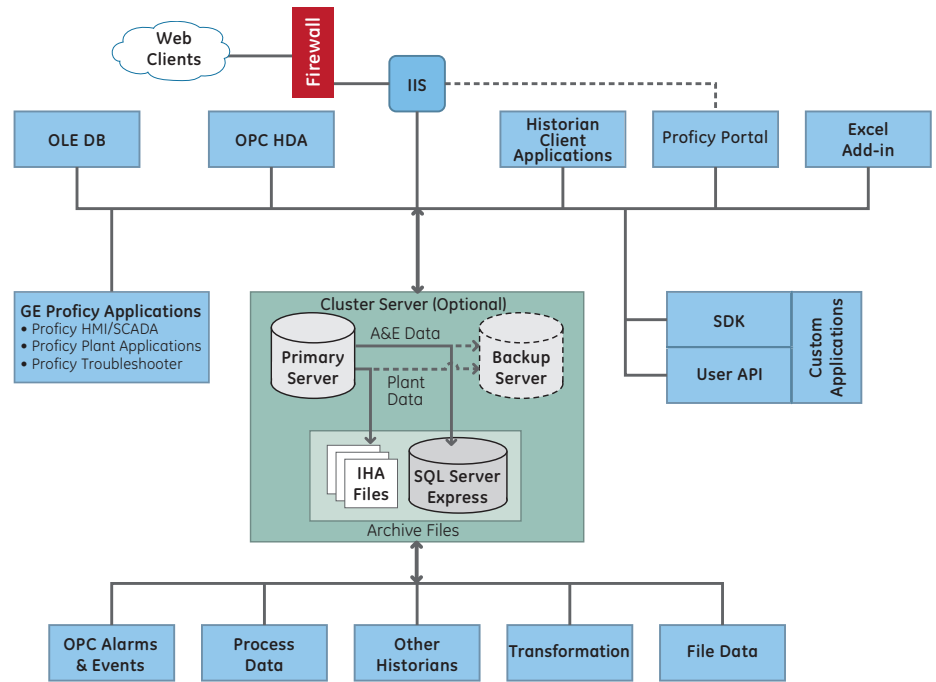

We recognize the significant investments that manufacturing companies have made in automation, information, and supervisory control systems.

That’s why Proficy’s open and layered approach provides an advantage—enabling interoperability with third-party solutions for faster time to value. There’s no need for expensive interfaces and customized code.

Proficy Historian can layer on many different manufacturers’ controls and HMI/SCADA platforms, and can even support embedded applications—unlocking value and providing the foundation toward a full operations management solution.

With Proficy Historian, you have access to an extensive portfolio of performance and execution applications:

- Advanced visualization and powerful analytical tools
- Broad range of industry- and application-specific solutions
- Seamless integration with the full Proficy platform to truly empower the enterprise

Proficy Historian system architecture

Proficy Historian is the foundation for optimized production and process operations. It offers seamless integration with a wide range of performance and execution applications within the Proficy software suite.

Proficy Historian 4.0 - The foundation of enterprise operations management

Specifications

Hardware Requirements

Historian Servers

- An Intel Core or Xeon 3GHz (or 2GHz Core Duo) or equal AMD CPU with minimum 4 GB RAM
- A DVD-ROM drive
- 100 Mbit TCP/IP-compatible network interface adapter
- A monitor that supports resolution of at least 1024 X 768 or better
- 80 GB free hard drive space, for the data archives, message files, buffer files, and log files used by the system

Data Collector nodes

- A Pentium 4-based 2.0 GHz or better computer with 1 GB RAM
- 40 GB of free hard drive space to store buffered data
- A DVD-ROM drive
- TCP/IP-compatible network interface adapter for network communication and certain I/O drivers

Microsoft Cluster service

- An Intel Core or Xeon 3GHz (or 2GHz Core Duo) or equal AMD CPU with minimum 4 GB RAM
- 80 GB of local free hard drive space
- 40 GB shared SCSI hard drive (RAID preferred)
- Two 100 Mbit TCP/IP-compatible network interface adapters for network communication and certain I/O drivers (one for public network, another for private network)

NOTE: The configuration of each server added to the cluster must be identical to the other servers in the cluster.

Software Requirements

- One of the following operating systems, with latest service packs or revisions:
 - Windows 7 Professional (32 or 64 Bit)
 - Windows Vista Professional (32 or 64 Bit)
 - Windows Server 2003 (32 or 64 Bit)
 - Windows Server 2003 R2 (32 or 64 Bit)
 - Windows Server 2008 (32 or 64 Bit)
 - Windows Server 2008 R2 (64 Bit)
 - Windows XP Professional SP3 (32 or 64 Bit)
 - Windows XP Embedded (32 Bit)

IMPORTANT: Historian 4.0 Collectors, Client tools, APIs, Non-Web Administrator, and Web Administrator works as a 32-bit application on 64-bit Windows operating systems using WoW64 mode (Windows-on-Windows 64-bit). However, you can read and write data from a 64-bit Historian Server.

- Internet Explorer v6.0, 7.0, or 8.0
- For systems with Historian Web Administrators, Microsoft IIS (Internet Information Server) 6.0 or 7.0 is required. IIS is not required for Historian Non-Web Administrators
- Network interface software for network communication. The TCP/IP network protocol required
- One of the following 32 bit or 64 bit SQL Server systems to configure alarm and event archiving:
 - Microsoft SQL Server 2008 Standard, Professional, or Enterprise Edition
 - Microsoft SQL Server 2005 Standard SP2, Professional SP2, or Enterprise Edition SP2
 - Microsoft SQL Server Express

- One of the following 32 bit versions of SQL Server to use Historian as a linked server:
 - Microsoft SQL Server 2008 Standard, Professional, or Enterprise Edition
 - Microsoft SQL Server 2005 Standard SP2, Professional SP2, or Enterprise Edition SP2
 - Microsoft SQL Server Express

IMPORTANT: Historian 4.0 does not support 64 bit linked SQL Server.

- The Historian Excel Add-In requires installation of Microsoft Office XP, Microsoft Office 2003, or Microsoft Office 2007.
- The Historian Web Administrator requires the Java Runtime Environment version 1.6 update 5.

About GE Intelligent Platforms

GE Intelligent Platforms, a General Electric Company (NYSE: GE), is an experienced high-performance technology company and a global provider of hardware, software, services, and expertise in automation and embedded computing. We offer a unique foundation of agile, advanced and ultra-reliable technology that provides customers a sustainable advantage in the industries they serve, including energy, water, consumer packaged goods, government and defense, and telecommunications. GE Intelligent Platforms is a worldwide company headquartered in Charlottesville, VA and is part of GE Home and Business Solutions. For more information, visit www.ge-ip.com.
